SKILLS

JavaScript, Python, Fast Api

ABOUT

I've delivered full-stack SaaS platforms end-to-end using Next.js, FastAPI, and Supabase owning the architecture, testing, and deployment of substantial multi-file codebases, not just individual features. I also work directly in Solidity and have hands-on experience architecting fintech systems, including Cuttlefish Labs, a swarm-based multi-agent trading platform I built with LLM-powered insights across a large Python/FastAPI codebase.

Beyond the code itself, I bring strong engineering discipline: Docker-based reproducible environments, automated and deterministic testing, and clear technical documentation all things that matter a lot when working with smart contracts, where correctness and auditability aren't optional. I've also spent time on the compliance side at Arrivy (SOC 2, ISO 27001, GDPR), so I understand the rigor expected around security-sensitive systems.
