

Oyekola Obajuwon

Full-stack engineer — TypeScript, Next.js, React, Node

Full-stack development (TypeScript/Next.js/React/Node) · \$45/hr · Available

Lagos, Nigeria · growveloper.com/about · linkedin.com/in/obajuwon-oyekola

SKILLS

TypeScript, Next.js, React, Node.js, PostgreSQL, Firestore, MongoDB, REST APIs, Firebase Auth

ABOUT

Full-stack engineer running Growveloper, a US + Nigeria growth studio. I've built and still maintain four production platforms solo, including a four-portal mobility SaaS on Next.js and Firebase with role-based access control enforced at four layers and six production Vercel cron jobs for automation. Daily stack is TypeScript, Next.js, React, and Node, with Postgres, Firestore, and MongoDB, REST API integrations, and webhook signature verification with idempotent processing. Comfortable picking up new stacks fast.

PROJECTS

Growveloper — studio site and lead-gen platform

growveloper.com

Next.js · TypeScript · Sanity CMS · Tailwind CSS · GSAP · Vercel · Stripe · Flutterwave

Next.js 16 + Sanity CMS + Vercel growth studio site I built and maintain solo. 30 Sanity schemas across roughly 120 content types, a GSAP animation system at scale, a Flutterwave webhook-verified paid-intake flow for growth audits with idempotent processing, and a multi-step Zod-validated qualifying form with dynamic field visibility.
