

Priyanshu Jain

Software Engineer | Backend & GenAI Systems. Specialist in building production-grade LLM pipelines, multi-agent architectures, and scalable APIs.

Available

Agra, India

SKILLS

Python, C++, FastAPI & REST APIs, LLMs & Multi-Agent Systems (LangGraph, LangChain), Fine-Tuning & RAG, SQL & PostgreSQL, Data Structures & Algorithms

ABOUT

I am a Software Engineer specializing in backend systems and AI-driven services. With hands-on experience at TeamLease RegTech, I design and deploy scalable solutions, including LangGraph-based multi-agent pipelines that cut operational workflows by up to 70%. My expertise spans fine-tuning LLMs (LLAMA, DeepSeek), building RAG frameworks, and architecting robust FastAPI microservices. From training specialized conversational AI models to engineering complex, schema-aware SQL generation systems, I bridge the gap between core backend engineering and cutting-edge GenAI. I thrive in fast-paced environments, focusing on clean APIs, performance tuning, and production-ready code.
