

Ravisankar V

Full-Stack Web3 Developer

Full-stack & Web3 · \$85/hr · Available

Tamil Nadu, India · [linkedin.com/in/ravi-sankar13](https://www.linkedin.com/in/ravi-sankar13)

SKILLS

TypeScript, JavaScript, React, Next.js, Node.js, Express, PostgreSQL, MongoDB, Prisma, Solidity, Hardhat, Foundry, ethers.js, Chainlink, REST APIs, Socket.IO, Git, Jest

ABOUT

Full-stack developer building with TypeScript across React/Next.js and Node.js, with hands-on Solidity, wallets, and EVM work. I like owning features end-to-end — APIs, databases, auth, on-chain integrations, and shipping. Looking for a full-time remote Web3 role where I can evaluate existing systems and build the next pieces.

EDUCATION

Rathinam college of arts and science · B.Sc, Computer Technology

Coimbatore, Tamil Nadu

Sep 2023 – May 2026

PROJECTS

DevSync

github.com/Ravisankar04/DevSync

TypeScript · Node.js · React · Socket.IO · Prisma ·

Real-time collaborative code editor built as a TypeScript full-stack monorepo with React, Node.js/Express, and Socket.IO. Includes live multi-user sync, Prisma/PostgreSQL, auth, and AI-assisted coding via server-proxied LLM streaming. Deployed across Vercel, Railway, and Supabase.

DSC Protocol

github.com/Ravisankar04/dsc-protocol

Solidity · Foundry · Chainlink

Overcollateralized ERC-20 stablecoin inspired by MakerDAO, with mint, burn, and health-factor liquidations. Integrates Chainlink price feeds for collateral valuation and enforces ~200% overcollateralization. Written in Solidity with Foundry unit and fuzz tests plus deploy scripts.

Decentralized Crypto Lottery

github.com/Ravisankar04/Decentralized-Crypto-Lottery

Solidity · Hardhat · React · Node.js

Full-stack Web3 lottery dApp using Chainlink VRF for verifiable on-chain randomness and automated prize distribution. React frontend handles wallet connection and lottery UX; Node.js + MongoDB covers app data and sessions. Hardhat scripts and tests support local and testnet deployment.

Lumina

github.com/Ravisankar04/lumina-security-auditor

FastAPI · LangGraph · OpenAI

Autonomous AI security auditor that takes a GitHub repo URL and returns a remediation pull request. Runs a multi-stage LangGraph pipeline for crawl, index, scan, fix, and PR creation, with RAG via OpenAI embeddings and Pinecone. Live progress is streamed to the UI over WebSockets.
