

Igor Zhudov

Payment verification engineer — TON/USDT, Telegram bots, TypeScript

Non-custodial payment verification and receipt infrastructure · Available

exactreceipt.com

SKILLS

TypeScript, Node.js, TON, USDT, Telegram Bots, Payment Verification

ABOUT

Available only for fixed-scope asynchronous freelance pilots, not employment. I build watch-only, non-custodial payment request and receipt verification across TON, EVM, Bitcoin, Solana and Tron. I maintain the Apache-2.0 WDK TON Address Watch project. No custody of customer funds or private keys.

PROJECTS

WDK TON Address Watch / ExactReceipt

exactreceipt.com

TypeScript · Node.js · TON · USDT · Telegram Bot API

Apache-2.0 watch-only infrastructure for verifiable payment requests and official USDT receipts. The current TON adapter monitors an existing address without custody or private keys; the architecture extends to EVM, Bitcoin, Solana and Tron.
